New Analysis and Forecasting Features in Excel

Excel has gotten quite a bit more powerful in 2016. New features include

1 . Pulling in data from almost anywhere. A former add-on called Power Query is now built in to Excel. Power Query can pull data from various sources for analysis, including websites and SQL, Azure, Access, and other databases.

2 . More charting options. Excel also has six new chart types.

- Box and whisker charts are most commonly used in statistical analysis.
- Histograms show frequency data in columns.
- Pareto charts highlight the biggest factors in a dataset.
- Sunburst charts show levels of a hierarchy that are represented in concentric rings.
- Treemap charts compare proportions within a hierarchy.
- Waterfall charts show a running total as values are added or subtracted.

3 . Predicting the future. The new time series forecasting functions can predict future values from historical data. The more data, the better the forecast.

Real-Time Co-Authoring in Word

If several people are working on a Word document that is stored in OneDrive for Business, real-time co-authoring allows multiple users to collaborate, edit, and update simultaneously. Everybody can see what everybody else is doing. They can see changes as they are made and even where cursors are currently placed.

Sharing Made Easy

Word, Excel, and PowerPoint now have Share buttons at the top right of the window. When you click a Share button, you are prompted to save your file to an online location, such as OneDrive. Then, in a panel on the right side of your window, you can enter the email addresses of the people you want to share the file with or select the addresses from your address book. You can choose whether they can edit the file or just view it.
